### Overview

Data entered into the program is not displayed in the format you are accustomed to. Using **Compensation Number Format Option** each user can control the local format that they see currency data displayed in.

---

### Question

How do we change the currency format we see displayed in our worksheets?

---

## Relevant Product

Compensation, Var Pay, CMP-5104

---

## Solution

Login and on **any page > Options Menu > Compensation Number Format**

From here you can set one of a number of formats. Each user can change it from the default to what they need.

1,234,567.89  
1,234,567.89  
1.234.567,89  
1 234 567,89

Currently the format setting is only supported by Compensation and Variable Pay modules.

This feature can be disabled by support. Open a ticket if you do not want to allow users to be able to adjust this setting from Options. Support will disable this in your instance settings > **Provisioning > Company Settings > Disable locale based number format**
